Nanosurf on the move!

Almost on the very day of the company's 14th anniversary, Nanosurf moved its headquarters to a new office location in the town of Liestal, Switzerland. Since May 30, 2011, Nanosurf AG has been operating from within its new premises, which offer an inspiring modern office environment with lots of room to serve visiting customers and to effectively perform advanced system demos. The flexible new workspace fits nicely with Nanosurf's strategy of continuous expansion, which has brought a consistent growth to the company over the years.

Having reached the limits of its previous headquarters' location, the recent move is symbolic of the organizational changes inside the company itself. From a three person's start-up in 1997, Nanosurf has matured into a highly organized multidisciplinary team of professionals that drive the development and marketing of its products. In addition to its headquarters in Switzerland, Nanosurf has subsidiaries in Germany and the US.

"Our focus has always been to best serve our customers worldwide — to be an innovative and professional solution provider, not merely a manufacturer of quality SPM products", says Dr. Urs Matter, CEO of Nanosurf. "The new office location underlines this focus even more clearly. With its ample space, unique design, and excellent reachability, it was a perfect match for our company."

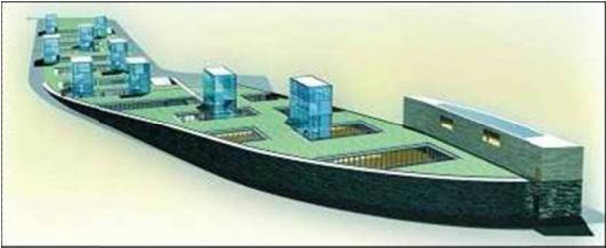

Nanosurf is a leading manufacturer of easy-to-use atomic force and scanning tunneling microscopes and their accessories, with a distribution network around the globe.
